DishDash – Quotation Management

Feature 0: Core CRUD & Authentication

Description:

Provides the foundational structure of the system, including secure authentication and the management of core entities such as ingredients, enabling all other functionalities.

Scope:

- Google OAuth authentication.
- Role-based access control (Chef / Client).
- Secure session persistence.
- Centralized ingredient catalog management.

Details:

- Users can sign in using Google credentials and are redirected based on their role.
- The system allows chefs to manage a catalog of ingredients including:
 - Density and unit equivalences.
 - Unit prices (per kilogram, liter, or unit).
 - Associated suppliers and price updates.
- This feature acts as the data backbone for recipe creation, cost calculation, and quotations.

Feature 1: Recipe Management

Description:

Allows chefs to create, manage, and organize recipes with detailed ingredients, instructions, and cost calculations.

Details:

- CRUD operations for recipes, including name, description, yield, and images.
- Ingredient assignment with quantities in multiple units (grams, cups, tablespoons, etc.).
- Step-by-step instructions with estimated preparation times.
- Automatic calculation of:
 - Cost per recipe.
 - Cost per serving.
- Recipe categorization (starter, main course, dessert, beverage, etc.).
- Search and filtering by category or ingredient.

Feature 2: Scales & Smart Unit Conversion

Description:

Provides intelligent unit conversion and dynamic recipe scaling based on ingredient properties and required servings.

Details:

- Automatic metric ↔ imperial unit conversions.
- Ingredient-specific density handling (e.g., flour vs sugar).
- Dynamic scaling of recipes when the number of servings changes.
- Automatic recalculation of ingredient quantities, yield, and costs.
- Visualization of conversion equivalences for user reference.

Feature 3: Quotations & Client Interaction

Description:

Manages the complete quotation lifecycle between chefs and clients, including requests, responses, scheduling, and documentation.

Quotations & Budgets

- Creation of personalized quotations for events (e.g., catering for N people).
- Selection of multiple recipes per quotation.
- Automatic calculation of:
 - Total cost.
 - Taxes (IVA).
 - Discounts and profit margins.
- Quotation status management: *Pending, Approved, Completed*.
- PDF export of professional quotations.
- Quotation history tracking.

Client Quotation Requests

- Clients can submit detailed quotation requests including:
 - Event type, date, location, number of guests.
 - Dietary restrictions and preferences.
 - Budget range and additional notes.
- Clients can track quotation history and statuses.
- Chefs can respond with:
 - Acceptance or rejection.
 - Proposed price and terms.
 - Menu suggestions or availability confirmation.

Calendar Integration

- Calendar linked exclusively to quotations.
- Visualization of events, deliveries, and deadlines.
- Ability to associate quotations with specific dates.
- Notifications and reminders for upcoming events.
- Visual distinction of event types.

Feature 4: Reports & Exportations

Description:

Generates analytical reports and exportable documents to support decision-making and communication.

Details:

- Report generation for:
 - Ingredients.
 - Recipes.
 - Cost calculations.
 - Scaled recipes.
 - Quotations (Chef and Client views).
- Export formats: PDF and Excel.
- Filtered and customized report generation.

Feature Prioritization & Phases

Phase 1 – Core Foundations (1.5 weeks)

- Feature 0: Core CRUD & Authentication
- Feature 1: Recipe Management

Phase 2 – Intelligent Operations (1 week)

- Feature 2: Scales & Smart Unit Conversion

Phase 3 – Client Services & Quotations (1.5 weeks)

- Feature 3: Quotations & Client Interaction

Phase 4 – Organization & Analysis (1 week)

- Feature 4: Reports & Exportations
