DishDash – Quotation Management

Feature 0: Core CRUD, Authentication & Dashboard

Description:

It establishes the functional basis of the system, allowing the management of users and ingredients, along with secure authentication, role control, and a central dashboard that supports all other functionalities.

Scope:

- User CRUD operations.
- Ingredient CRUD operations.
- Authentication with Google OAuth.
- Role management (Chef/Client).
- Secure session persistence.
- Main dashboard based on user role.

Details:

- Users can log in using Google and are redirected according to their role.
- The system manages roles and permissions to limit access to features.
- Chefs can manage a centralized ingredient catalog that includes:
 - Units of measurement and equivalencies.
 - Prices per unit (kilogram, liter, or unit).
- The dashboard displays key information based on the user's profile (chef or customer).
- This feature serves as the system's database and control center for recipes, cost calculations, and quotes.

Feature 1: Recipe Management

Description:

It allows chefs to create, manage, and organize recipes with detailed ingredients, step-by-step instructions, cost calculation, and data export.

Details:

- Complete recipe CRUD (name, description, yield, and category).
- Ingredient assignment with quantities in different units.
- Step-by-step instructions with estimated preparation times.
- Automatic calculation of:
 - Total recipe cost.
 - Cost per serving.
 - Price per serving.
- Step-by-step instructions with estimated preparation times.
- Recipe categorization (appetizer, main course, dessert, beverage, etc.).
- Search and filter by category or ingredients.
- Image upload via drag and drop.
- Recipe export (PDF).
- Connection of recipes to the customer catalog.

Related Reports:

- Recipe Reports
- Cost Reports per Recipe and per Serving

Feature 2: Scales & Smart Unit Conversion

Description:

It offers dynamic recipe scaling and intelligent unit conversion based on the number of servings and the specific properties of each ingredient.

Details:

- Automatic conversion between metric and imperial units.
- Handling specific ingredient densities.
- Dynamic recipe scaling when the number of servings is modified.
- Automatic recalculation of:
 - Ingredient quantities.
 - Total yield.
 - Updated costs.
- Visualization of conversion equivalences for user reference.
- Display of conversion equivalencies for user reference.

Associated reports:

- Scaled recipe reports.
- Adjusted conversion and cost reports.

Feature 3: Quotations & Client Interaction

Description:

Manage the entire lifecycle of quotes between chefs and clients, from request to approval, tracking and final documentation.

Quotations & Budgets

- Create custom quotes for events.
- Selection of multiple recipes per quotation.
- Automatic calculation of:
 - Total cost.
 - Taxes (IVA).
 - Discounts and profit margins.
- Quote statuses: Pending, Approved, Completed.
- Export quotes to PDF.
- Quotation history tracking.

Client Quotation Requests

- Clients can submit quote requests indicating:
 - Type of event, date, location, and number of guests.
 - Dietary restrictions and preferences.
 - Budget range and additional notes.
- Tracking of quote status by the client.
- Response from the chef with acceptance, rejection, or a proposal.

Calendar Integration

- Exclusive calendar for quotes.
- View events, deliveries, and deadlines.
- Associate quotes with specific dates.
- Reminders and notifications for upcoming events.

Associated Reports :

- Quotation reports (chef and client views).
- Event and budget history.

Sprint Backlog

1 Recipe Managements

- 1.1 Create ingredient catalog.
- 1.2 Assign units and prices to ingredients
- 1.3 Recipe data form.
- 1.4 Step by step instructions
- 1.5 Drag and drop for images
- 1.6 Calculate cost per serving
- 1.7 Calculate price per serving
- 1.8 Categorize, search and filter recipe
- 1.9 Export recipes.
- 1.10 Connect recipes with client catalog

2 Scales & Smart Unit Conversion

- 2.1 Assignment of units of measurement
- 2.2 Calculate unit conversion
- 2.3 Calculate portion scaling
- 2.4 Automatic ingredient scale calculation
- 2.5 Calculation of the estimated price per portion
- 2.6 Reference to the total number of products to buy
- 2.7 Creation of a report by recipe escalation
- 2.8 Calculate Cost Analysis
- 2.9 Calculate unit cost and total cost per ingredient
- 2.10 Calculate taxes
- 2.11 Categorize, search and filter scales, conversion and costs.

3 Quotations

- 3.1 Personalized chef quotation
- 3.2 Personalized client quotation
- 3.3 Relate recipes and ingredients with quotation
- 3.4 Calculate total cost
- 3.5 Calculate taxes
- 3.6 Calculate discounts and profit margins
- 3.7 Assign status management for quotations
- 3.8 Generate PDF report per quotation.
- 3.9 Assign quotation to chef Google Calendar
- 3.10 Create notifications of client quotations with option to accept or reject
- 3.11 Categorize, search and filter chef quotations.

Feature Prioritization & Phases

Phase 1 – Core Foundations (1.5 weeks)

- Feature 0: Core CRUD, Authentication & Dashboard
- Feature 1: Recipe Management

Phase 2 – Intelligent Operations (1 week)

- Feature 2: Scales & Smart Unit Conversion

Phase 3 – Client Services & Quotations (1.5 weeks)

- Feature 3: Quotations & Client Interaction
